

**XOUT™ ETF**

as of September 30, 2019

**INVESTMENT OBJECTIVE**

The GraniteShares XOUT U.S. Large Cap ETF seeks to track the performance, before fees and expenses, of the XOUT U.S. Large Cap Index.

**ADVANTAGES OF XOUT**

**Aims to Leave Losers Out:** Instead of trying to pick the winners, XOUT flips the investing paradigm by seeking to identify companies likely to underperform, and excluding them from the portfolio.

**Forward Facing:** Technological disruption is challenging businesses across all industries. XOUT takes the 500 largest U.S. companies, and eliminates 250 names that may be failing to adapt.

**XOUT LISTED NYSE ARCA**

**Alternative Indexing:** Passive investing buys everything in the market, even companies in long-term decline. XOUT seeks to detect losers with quantitative scoring, and attempts to leave them *OUT*.

Performance data quoted represents past performance and is no guarantee of future results. Current performance may be lower or higher than the performance data quoted. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than original cost. Returns less than one year are not annualized. NAV prices are used to calculate market price performance prior to the date when the Fund first traded on the New York Stock Exchange. Market performance is determined using the bid/ask midpoint at 4:00pm Eastern time, when the NAV is typically calculated. Market performance does not represent the returns you would receive if you traded shares at other times. **Investing involves risk; Principal loss is possible.**

The XOUT U.S. Large Cap Index utilizes a proprietary, quantitative methodology developed by XOUT Capital, LLC designed to identify companies that have a risk of being disrupted and as a result could underperform their relevant sector. The companies identified are then excluded from the index selection.

The Fund is passively-managed and attempts to mirror the composition and performance of the Index. The Fund's returns may diverge from that of the Index due to costs and expenses incurred by the Fund or its holdings may deviate from a precise correlation with the Index. The Index uses proprietary methodology to exclude certain securities and there can be no assurance this will result in positive performance. The Fund may concentrate its investments to the same extent as the index and it may be exposed to the risk of loss from adverse developments facing those industries.

One cannot directly invest in an index.

Distribution Rate represents a single distribution from the fund and does not represent total return to the fund. The distribution rate is calculated by annualizing the most recent distribution and dividing it by the most recent NAV.

30-Day SEC Yield is a standard yield calculation developed by the Securities and Exchange Commission that allows for fairer comparisons among bond funds. It is based on the most recent month end. This figure reflects the interest earned during the period after deducting the Fund's expenses for the period.

This information is not an offer to sell or a solicitation of an offer to buy shares of any Funds to any person in any jurisdiction in which an offer, solicitation, purchase or sale would be unlawful under the securities laws of such jurisdiction.
